HOSPITAL

We'll Treat You Well

Digital Version

Benefits

- No surgical incision is needed-only a small nick in the skin that does not have to be stitched.
- This procedure leaves virtually no scars because catheter placement requires skin openings of only a few millimeters, not large incisions.
- Endovenous ablation offers a less invasive alternative to standard surgery.
- Patients report symptom relief and are able to return to normal daily activities immediately, with little or no pain.

LASER FOR FISTULA IN ANO

It is a day care procedure performed under anesthesia in 30 minutes post which the patient can be discharged. Laser energy is delivered by radial fiber directly in the fistula in ano to shrink the fistula from inside. Moreover, laser energy

is used to reduce the blood supply nourishing the abnormal growth.

Benefits

- Low pain score
- Can resume work immediately
- Less risk involved as minimal Time taken to complete procedure is only 10 to 15 minutes in outpatient department.
- Can be performed as same day
- Less post-operative discomfort to patient
- Faster recovery

LASER TREATMENT FOR PILONIDAL SINUS

Laser surgery is a relatively quick and effective treatment for pilonidal sinus. Located near the top of the tailbone, these sinuses are pockets that become

embedded with hair and debris, and infection results. The intent of surgery is to clean out the infected area and remove the pit so that infection does not recur.

Benefits

- Recovery time is usually shorter and easier
- Patient able to return to normal activities sooner
- Less pain

LASER HEMORRHOIDOPEXY

Latest laser technology is a boon for patients to treat hemorrhoids. It produces high form of concentrated thermal energy to shrink the hemorrhoids without hurting other areas around. Duration of the operation takes between 20-30 min, the patient is allowed to eat after 3 hours, with no pain and speed recovery, compared to traditional hemorrhoids surgeries, It is also suitable for cardiac patients who use blood thinners (Anti-coagulants) without stop procedure. Patient can return to his normal life and work within 2 suitable for all ages of both sexes.

Benefits

- Less pain
- Speedy recovery
- No suture
- No chance of anal incontinence

ENDOVENOUS ABLATION OF VARICOSE VEINS

Varicose vein treatment, also known as endovenous ablation, uses radio cauterize and close varicose veins in the legs. It may be used for cosmetic used to help ease varicose vein related symptoms such as aching, swelling, skin irritation, discoloration or inflammation. Endovenous ablation is safe, less invasive than conventional surgery, and leaves virtually no inflammation. Endovenous ablation is safe, less invasive than conventional surgery and leaves virtually no scars.
