Digital Version

ARE ALLERGIES AND ASTHMA MAKING YOU MISERABLE? ALLERGY DROPS OFFER A SIMPLE SOLUTION.

Pills, nasal sprays and inhalers may take the edge off of your allergy symptoms, but they don't address the source of the allergy. Stop the medications and the symptoms return!

For lasting results, you need immunotherapy—the only treatment proven to change the underlying allergic disease. Immunotherapy is available through shots or under-the-tongue drops, but drops are safer and more convenient than shots. No more driving to the doctor's office for painful injections. Drops can be taken in the comfort of home.

HOW DO SUBLINGUAL (UNDER-THE-TONGUE) ALLERGY DROPS WORK?

Like allergy shots, drops contain extracts of common allergens. When placed under the tongue, the drops are absorbed into the bloodstream, gradually desensitizing the body to the

allergens so that it will stop overreacting to the environment in ways that lead to troubling symptoms.

HOW LONG UNTIL I FEEL BETTER?

Because sublingual drops can be dosed more frequently than shots, the vast majority of immunotherapy patients experience marked symptom relief within the first few weeks of starting treatment, and some feel better in just a few days.

ARE ALLERGY DROPS SAFE?

Sublingual allergy drops contain the same all-natural antigens found in shots. However, because drops have not been associated with the same degree of risk for anaphylactic reaction as shots, they are safe enough to be taken at home.

DOES THE PROGRAM WORK WELL FOR CHILDREN?

Since immunotherapy drops are pain-free and easy to administer, they are an attractive choice for children. In addition,

unlike shots, drops have been shown to be safe for children under age five.

WILL IMMUNOTHERAPY DROPS WILL WORK IN OTHER PARTS OF THE COUNTRY?

Yes. While many allergy programs only treat for a small selection of local pollens, immunotherapy medication contains most common pollens from around the world. Slip your vial of allergy drops into your travel bag and venture out with thorough allergy protection.

WHEN WERE SUBLINGUAL ALLERGY DROPS DEVELOPED?

Sublingual immunotherapy was developed over 60 years ago. It is widely used throughout the world and is especially popular in Europe where it accounts for more than 45 percent of allergy treatment.

GETTING STARTED IS AS EASY AS 1-2-3!

- Consult with your doctor and get a brief allergy test
- Once approved for treatment, you will receive your allergy serum
- Take serum daily as under-the-tongue drops for relief

WHY CHOOSE THE IMMUNOTHERAPY PROGRAM?

- Take painless under-the-tongue drops in the comfort of home
- Avoid frequent trips to the physician's office for allergy shots
- Lasting results – not just a "band-aid" fix
- For children to seniors – safer and less age-restrictive than shots
- Comprehensive serum protects against most allergens worldwide –not just a few local ones

- Contains the same all-natural antigens found in allergy shots
- No painful, drawn-out allergy testing – short and sweet!
- For food allergies, too

DO YOU HAVE ALLERGIES?

- Sneezing
- Watery or itchy eyes
- Runny or stuffy nose
- Chronic sinus and ear infections
- Asthma or chronic cough
- Recurrent colds or bronchitis
- Eczema and hives
- Muscle and joint pain
- Headaches
- Fatigue
- Gastrointestinal problems (food allergies)
